The DPR-1061 multifunction print server is a versatile multi-port print server ideal for use at the office, school and business. With 2 USB ports and 1 parallel port for printer connection, this device gives you the versatility of adding multiple printers or multifunction equipment to your network. Creating up to 3 printer/multifunction equipment connections, the DPR-1061 is an easy and cost effective way of sharing multiple devices over a network.

Multifunction Equipment Sharing. The DPR-1061 offers a high level of versatility through its compatibility with a wide range of printer models. Printing a file on a network printer is transparent, and users can easily control the scanning of documents and photos. In addition, users can now send out documents to the multifunction equipment directly from their PC via the DPR-1061 for the transmission of faxes. Enjoy the many facets of this device through its versatility with a wide range of USB multifunction equipment and backward compatibility with USB 1.1 and 1.0 printers.

Simultaneous Operation of Connected Printers. With 3 printer connections available from a single device, the DPR-1061 is the perfect choice for environments where space or price is a concern. Equipped with a powerful CPU, large buffer size, high-speed USB port and high speed network data transfer, the DPR-1061 makes operation fast. All shared devices attached to the DPR-1061 can print, scan, and fax at the same time, giving this multi-port print server a similar performance to 3 separate single-port print servers.

Access Security and Multiple O.S. Support. The DPR-1061 provides the necessary security by allowing the administrator to configure user access right to the network printers and equipment. It supports many network OS, including Windows and Linux, giving users the flexibility to install the print server regardless of its network environment.
